Dear Matt:

**Project in Municipality of Clarington, Ontario: Storm Water Management Pond No.3 at Wilmot
Creek Retirement Community Expansion Phase 7
Regarding: Erosion Protection using Cable Concrete Product**

We have specified "Cable Concrete CC-35" c/w underlay terrafix 270R filter cloth as erosion protection at the head wall outlet to forebay and storm pond lining at forebay areas for easy removal sediments. Storm Pond 3 has been commissioned by the Municipality of Clarington in November 2007 and since we have been satisfied with the overall performance of the "Cable Concrete Erosion Control System".

Sincerely,
AECOM Canada Ltd.
