Re: Cable Concrete Product

Delcan Corporation specified "Cable Concrete" on MTO Contract 2010-3016 for a project on Highway 24 near Brantford, ON in the year 2010. "Cable Concrete" was specified to protect the underside of new bridge abutments due to potential scour and storm runoff from Whitemans Creek under the newly constructed bridge crossing. In addition to the durability and erosion protection, the Cable Concrete also provided a suitable surface for wildlife crossing under the bridge.

We have been very satisfied with the overall performance to date of the "Cable Concrete" used in the above mentioned project and we will continue to specify the product where it can provide a solution for a specific need we may encounter.

Yours very truly,
